

Ecommerce Sales Dashboard | Power BI

Project Overview

This project presents an interactive **Ecommerce Sales Dashboard** built using **Power BI** to analyze sales performance across different states, categories, customers, payment methods, and time periods.

The objective of this dashboard is to convert raw sales data into meaningful business insights that help stakeholders make informed decisions regarding profitability, customer behavior, product performance, and regional sales trends.

The dashboard enables users to filter data dynamically by month and quarter, making it easier to identify trends and compare performance over time.

Objectives

- Analyze overall sales performance.
- Track revenue, profit, quantity sold, and average order value.
- Identify high-performing states.
- Analyze category and sub-category sales.
- Understand customer purchasing patterns.
- Study preferred payment methods.
- Monitor monthly profit trends.
- Build an interactive dashboard for business decision-making.

Key KPIs

KPI	Value
Total Profit	12K
Total Sales Amount	118K
Total Quantity Sold	1409
Average Order Value	33K

Dashboard Highlights

The dashboard includes:

- ❖ Sales by State
- ❖ Category Performance
- ❖ Monthly Profit Analysis
- ❖ Top Customers
- ❖ Sales by Sub-category
- ❖ Payment Method Distribution
- ❖ Interactive Month Filter
- ❖ Quarter Selection

Business Insights

Some important insights obtained from the dashboard include:

- ✓ Maharashtra generated the highest sales.
- ✓ Clothing contributed more than 65% of total category sales.
- ✓ COD is the most preferred payment method.
- ✓ November generated the highest monthly profit.
- ✓ Printers and Sarees are the top-selling sub-categories.
- ✓ Lalita is the highest revenue-generating customer.

Tools Used

- Power BI
- Power Query
- DAX
- Microsoft Excel

Skills Demonstrated

- Data Cleaning
- Data Modeling
- DAX Measures
- Interactive Dashboard Design
- Business Intelligence
- Data Visualization
- KPI Reporting
